11: Cipriani E-3 (1951-1955) 1966 AZ2 Andamans AZ2

Owing to the difficulty of pushing through the undergrowth the Onges always travel in single file, following closely behind one another, the men first, then the women and children, with the dogs following all round. They never travel alone; I hardly ever met any by themselves, but always in groups of families or groups of hunters. The man who happens to be at the front of the file is the guide and when they come to an awkward part of the journey – perhaps across a deep river – everybody helps. Trees are felled to fall across between the banks and a rope of lianas is run across to make the crossing easier for the aged, the women and the children, though their sense of balance is so good that most of them manage without it, even when carrying heavy loads across a single trunk.

The Onges are now nearly all related to each other in some way. They all know each other, and the contacts are usually friendly. The few squabbles which I saw, always over game, or food that had been gathered, all blew over very quickly; normally, especially in the dry season when every group becomes nomadic in search of food, everyone went freely all over the island. On the occasions of the great hunts, or the honey feasts, a number of groups would band together for the occasion and even then they tried to divide the spoils equally and peaceably. If a dispute does arise the camp will break up into factions, but these will still keep close to each other and after a short while their differences will be made up with the usual long and tearful embraces. These scenes of reconciliation may go on for days, all starting from nothing more serious than a difference of opinion over the division of game captured by communal effort!

Much more important than the danger of offending other human beings is that of causing offence to the spirits of the dead or the guardian spirits who provide food. There is, as I have said, not overmuch rigidity in their observations – no propitiatory offerings of any kind are made to the spirits. The supreme being, Eiuga, who takes the shape of a lizard bigger than a crocodile, they know well. On Great Andaman he becomes Puluga, equally powerful, lord of men and things but rather more anthropomorphic than his counterpart in Little Andaman. As Eiuga lives in the sky, the thunder is his voice, and the wind his breath; if he is angry he breathes out storms and throws burning tree-trunks down to the earth, setting light to the forest. Behind Eiuga are a series of minor spirits who

11: Cipriani E-3 (1951-1955) 1966 AZ2 Andamans AZ2

rule the multiplication and growth of the various animals and plants useful to Man.

The Onges do not love Eiuga, or any of the other spirits. They merely fear them, and seek to evade their anger by various expedients. It is curious that they never hesitate to try and deceive the spirits and think themselves very clever when they manage to steal roots or tubers from the ground. Nor do they revere the spirits of their ancestors; these are to be feared and propitiated by preservation of their bones. By definition none of the spirits, since they can be deceived by simple tricks, can be all-powerful, but this conclusion, simple though it is, is still beyond the Onges' powers of reasoning.

The Onges' fear of the dead is instanced by their carrying round their necks the *ibidanghe*, or necklet of human jaws, as a propitiation. The wearing of the bones prevents the spirit from going away (by analogy the bones of dead enemies are burned to force the spirit, clearly a hostile one, to leave the place). The custom of burial within the communal hut follows the same logic – the spirits of the dead are kept near their bones and hence near their relatives, to help them in the daily round of hunting, fishing and gathering food.[1]

Unlike most of the other peoples whose burial customs are even today based on their underlying principles, the Onges have not progressed beyond the stage of relating the dead directly to the demands of daily life; they have no 'practices' of any kind, no concept at all of holy places, prayers or images. Even the very names of the dead are soon forgotten. Their fears, however, are none the less very real. They do not like to speak of Eiuga or even of the lesser spirits, for fear of attracting their attention.

The Onges have no stories or explanatory legends, like those reported by Brown for Great Andaman. They have only short epics, if such they may be called, recalling extraordinary events in

[1] This belief is of very remote origin, and can be traced back at least to the megaliths of southern Asia, like the splendid ones which I was able to photograph, among others, in the mountains of Travancore. Here again the object was to prevent the dead from leaving their relatives. Similar ideas are found today in India among several tribes, notably the Munda, or Nias, and among various peoples of Indonesia, and even Oceania. The rituals are probably followed today without any understanding of their meaning or symbolism; the details vary from place to place, but the underlying principle, the original fear, remains the same everywhere.

11: Cipriani E-3 (1951-1955) 1966 AZ2 Andamans AZ2

They have neither incantations, amulets nor propitiatory signs to help them. Even the *marque de chasse* found on their arrow heads had no major significance; in all probability they merely served to indicate the best arrow and at most they served as a warning to the womenfolk not to touch them (it is interesting that I never saw any woman or child with a bow or an arrow). But this is as far as they go towards superstition, and its only effect is to enhance the division of duties between the sexes.

The Onges, unlike the Jarawas and Arioto, have never lost the art of canoe making, and the building of a new canoe is an important matter. The selected tree, always one of the three species of *Sterculia*, is felled and then hollowed out slowly and laboriously with a rudimentary form of hatchet, the work often being done by one man alone. The weight of the felled trunk makes it necessary for the work to be done where it falls, but after much patient whittling away the resulting canoe is extremely light, with thin walls, though still not light enough to be carried to the water, never far away. A series of short logs are used as rollers in the age-old way and the builder's friends all gather to help clear a way through the undergrowth and prepare the rollers. Only a few are needed; all is soon ready and the Onges watch delightedly as the canoe glides away down to the shore. These canoe-ways often provided me with an easy path to the sea if I came upon them in the forest. Sometimes they led not to shore but to one of the many creeks, where salt water and marine fauna penetrate miles inland and make it easy for the Onges to launch their canoes from a point far from the sea.

The Onge canoe, hollowed out in one piece, is a survival of the ancient canoes of the Neolithic age, found in Switzerland and elsewhere in Europe. It survives in the Andamans, and through Oceania to the Americas, in northern Asia (notably among the Ainu) in south-west Asia, and even in south-east Africa.

The canoe has no distinction between bow and stern, and is commonly navigated from either. At each end of the canoe a crude platform juts out, on which the harpoon-throwers stand. Very careful attention is paid to the float, which is fragile, and is therefore kept on the lee side. The object of it is to prevent the canoe from capsizing, which it is otherwise very liable to do owing to its round keel, always left in the natural shape of the tree-trunk. I had some experiences of rough seas in one of these canoes

252 their love of existing with as little effort as possible is paramount.
372 Since any wood is as good as the next for making a fire, the
824 spirits conveniently have nothing to say in the matter. In other
782 circumstances material considerations lead to quite the opposite
222 effect: when the Onges dig up roots or tubers they not only replace the earth, but cover the place with leaves, the ritual having the good practical objective of appeasing the spirits and ensuring further supplies.

171 The preservation of skulls for magical purposes or out of pure
224 superstition survives mainly in Asia and Oceania. In Asia it coincides with other beliefs which demand the killing of domestic animals by strangulation. I have seen this practised along the high reaches of the valley of the Brahmaputra, particularly among the Abor, and the Nagas, and in many other tribes to the south of Tibet and China, all of whom preserve skulls. Head-hunting, found throughout southern Asia, in the islands, and as far as Oceania, is also practised in the areas where animal skulls are preserved.

171 The preservation of animal skulls, particularly bear skulls, is still practised in mongoloid peoples as far as the north of Asia; apart from the Andamans and the Nicobars, human and animal bones are preserved in many parts of Indonesia and as far as New Guinea. In the corona of small islands along the west coast of Sumatra the custom coincides with many others, as well as with certain types of huts and canoes, all present in the Andamans and Nicobars. A good example are the huts raised up off the ground on stilts, common in the Nicobars, Nias, Engano, Mentawai and various parts of Indonesia. The single-boom canoes of these areas, quite apart from their general similarity of structure, all have certain identical features, even to the method of fixing the lateral float of green wood, with pointed hardwood pegs stuck in it like spills. This, again, cannot be due to chance; it must be the effect of a very ancient cultural diffusion, now surviving only in a few specific areas.

224 The skulls preserved by the Onges have one point of interest;
531 it is the duty of the wife to clean the trophies brought back by her
462 proud husband and then paint them lovingly with lines of ochre. After every successful hunting expedition the wives can be seen busily painting, while the husbands look on with satisfaction.

11: Cipriani E-3 (1951-1955) 1966 AZ2 Andamans AZ2

head ornaments and religious ceremonies. In Oceania there is, too, the habit of changing personal names from time to time so prevalent among the Onges, and the existence of actual linguistic connections between Nicobarese, Andamanese, Semang, Aetà and peoples of Oceania have been demonstrated by experts.

Any differences which exist today are the result of centuries of contact with other peoples which the Semang and Aetà have experienced, unlike the Andamanese, who thus represent today the true Negritos. While life generally has changed somewhat over the centuries for the Semang and Aetà, certain typical facets of their culture have remained unaltered. Ritual cutting and distributing of game, the use of the arrow harpoon (always unfeathered) and the simple Onge-Negrito bow are still the same, despite the fact that the three groups have been separated for a very long time. Even the very absence of defensive weapons is a common feature; admittedly outside the Andamans arrows are poisoned and some may be feathered, but this is a recent and imitative innovation which is not found among the Andamanese, by virtue of their constant isolation. The persistence among the Onges of the simple bow tends to support the idea of Little Andaman as the first stage in the northward spread of the Negritos after they reached the island from Sumatra via the Nicobars. In Malacca the Semang have retained the same bow, as have the Aetà in the Philippines.

Among what may be termed similarities of physical habits is nose-rubbing as a sign of affection, found in the Andamans, in Oceania, and parts of Papuasia and Melanesia. In all these areas there is the same belief that pregnancy is due to entry of a spirit into the body, and the same habit of suckling children for as long as four years. Similar too throughout the area are the methods of 'curing' disease, such as smearing with ochre and heavy massage carried out beside a fire, swallowing of balls of ochre, and the 'smoking' of wounds, smeared with a mixture of ochre and honey. As protection from the sun or the rains (especially for the young children) crude umbrellas are made from giant palm leaves.

There are no prayers or propitiatory sacrifices to ensure health and well being, but there is throughout the area the same concept of mysterious forces to be feared, evaded, or let loose against enemies – never loved. Generally they are thought of in terms of spirits, usually active at night. There is some divergence in the

11: Cipriani E-3 (1951-1955) 1966 AZ2 Andamans AZ2

dead were buried securely bound in a knee-to-chest position, still the custom among the Andamanese). The Onges go no further than this and the idea of a Lord of the Spirits who rules all things, although on Great Andaman there has been some progress towards more anthropomorphic concepts. The complete absence of any form of cult, prayer, representation, or votive offering cannot, I feel, be the result of cultural decline from a more advanced age; this would have resulted in gross distortion and illogical superstition, but not in complete absence of any 'religious' practices of any kind.

18 SACRIFICE

No sacrifices of any kind are practised in the Andamans, nor is there any concept of propitiation, although there is evidence that even in the late Palaeolithic era some form of ritual sacrifice was practised, at least in Europe and probably over a much wider area. One would assume from this, and from paragraph 17 above, that the Andamanese is an even older culture.

19 TABOOS

Although my own experiences among the Onges have led me to think that taboos do not exist, some authors have asserted (in my view wrongly) their existence on Great Andaman. It is not, however, possible to draw any reliable conclusions on this point.

20 CEREMONIAL

The complete absence of any form of ritual surrounding birth, the purification of women, initiation, etc., or evidence of any such ritual in the past, is striking, in view of the prevalence in all the surrounding areas of strictly observed ceremonial for many occasions. As in the case of religion, such complete absence can only mean that the Andamanese became isolated before the idea of ritual spread to the area.

21 MEASUREMENT

The Andamanese have no means of counting, and no words to express gradations of time or size; to them everything is either 'small' or 'big'. They take no interest in the passing of years, and have no idea of their own age. To them life is but the passing of the seasons and the harvests of game and fish and fruits that they bring. This utter lack of any sense
